Code Review Template β

Me: _____ My Partner: _____

Show Your Code To Your Partner
*Please only show, **do not send your code directly via email, slack, github or other means**.*

An important aspect of code reviews is to remain polite and professional. Try to focus your comments on constructive criticism (concrete and specific changes that would improve the code). A helpful strategy is to make sure you're discussing and criticizing ***the code*** and ***not the person / author***.

Overview
Have your partner show you all the code they wrote so far.

How many files are there? _____

How many functions are there? _____

How many lines of code are there in total? _____

Estimate the completeness of your partners code. _____%
0% (started working in class today) – 100% (finished)
Note: It's not necessary to have the project 100% complete at this time.

Constructive Criticism
Give your partner one piece of constructive criticism regarding their code. Consider the backside of this document for inspiration about what you can say.

Question
Write down one question you asked your partner about their code.

Style & Readability
Is proper indentation used?
Are {'s and }'s placed appropriately and consistently?
Are variable and function names appropriately short and descriptive?
Are there comments that answer the question "Why?"
Are comments given in the most appropriate places in the code?

Assignment Instructions
Does the code correctly follow the assignment instructions?
If you and your partner made different choices for a specific segment of code, do the assignment instructions allow for both choices?

Bugs, Pitfalls and Potential Hazards
Did a spot a bug?
Does your partner's code differ from yours in a specific function or area? Is one approach better than the other?

Production Environment and Development Environment
Are there any issues with git, GitHub, Make, g++ or any other aspect(s) of development operations?
